

WHAT IS FEEDU?

The FEEDU Project (Persuasive force of children through education), belongs to the Intelligent Energy – Europe Programme 2005-2007, which aims at the energy awareness of children in primary schools, with the emphasis on the education of educators-teachers.

The project is based on the experience of a former FEE-Project, and Altener project that was held from 2002-2004. The nature of the FEE-project was the use of interactive methods in schools in order to learn children about energy consumption. The difference between FEE and FEEDU is that, in FEEDU we will teach the teachers how to work with energy content on a project based way.

The North East London Energy Efficiency Advice Centre is currently a partner in this exiting new European Union funded initiative. Practically, the project also has its target group's-teachers, educators, pupils, as well as parents. The quoted subjects are related to rational energy management, renewable energy sources and transport management issues. The project involves ten primary schools in the East London area in conjunction with schools in 8 other European Union Countries, such as, Belgium, Sweden, Italy, United Kingdom, Greece, Portugal, France, Germany, and Slovakia. The 13 organisations, mostly energy agencies in the different countries are committed to and involved in the project as a project-facilitate partner.
